WORK EXPERIENCE

Staff of the Secretariat of Administration of the Directorate General of Railways

Ministry of Transportation Republic Indonesia December 2024 – April 2025

- Managed over 50 digital and physical meeting presentation materials, revised them as needed, and categorized them into appropriate directorate and topic folders, accelerating the search process by 30%.
- Attending 10-20 meetings every week on various topics related to railway cases and industry knowledge, working on 10+ meeting minutes documents, and organizing presentations at meetings.
- Develop 5+ infographics in the form of presentations from meeting notes using Canva or PowerPoint.

Manual QA Tester Intern (STI Division)

PT. BANK NEGARA INDONESIA

March 2023 – Feb 2024

- Conducted 10+ functionality tests on various mobile applications and transaction devices, including **BNI Credit Card**, **BNI TapCash**, **BNI Mobile Banking**, **EDC Ingenico**, and **RFID Card Reader**. Performed API testing using Postman, verifying backend responses and system logs during the BNI Credit Card and BNI Mobile Banking registration process via MobaXterm and HeidiSQL. In total, I've conducted and documented more than 750 test cases.
- Collaborated closely with mentors and teammates. Attended and performed on 5+ User Acceptance Test sessions, making sure each session went smoothly with every stakeholder involved by upholding good manners.
- Reported bugs, errors, and defects to the development team, contributing to improved application performance and user experience. Reviewed and adjusted test scenarios for effective documentation.

EDUCATION

B.Sc of Computer Science Bina Nusantara University (BINUS) Sept 2019 – Oct 2024
(Relevant coursework: Information Visualization, Multimedia Systems, Web Programming, Software Engineering)

Highschool SMAN 9 BEKASI 2016 – 2019

TECHNOLOGIES and SKILLS

- Tech Stack: HTML, CSS, JavaScript, SQL, Python, PHP, Java, Laravel, React
- Tools and Software: Microsoft Office, Canva, Postman, Selenium, Git/GitHub, Unity
- Efficient in documenting and reporting project findings clearly
- Familiar with manual testing processes and general bug reporting
- Skilled in analyzing complex problems to develop effective approaches

PERSONAL PROJECTS

Rising Hell Prologue Playtesting – Toge Productions Personal project (September 2025)

Rising Hell is a challenging 2D platformer game that challenges players to navigate vertical levels full of obstacles, enemies, and unique *roguelite* mechanics. This project aims to ensure that every element of the game runs smoothly, including character controls, level mechanics, object interactions, and bug detection that can affect the player experience. There are over 200 test cases covering aspects such as UI/UX, Combat & Enemy Interaction, Level Design, Audio Visual, and Abilities.

HLTV.org Automation Testing with Selenium Personal project (August 2025)

HLTV.org is an esports news and forum website for the Counter-Strike 2 game. The testing process for this website began with the design of 60 manual test cases across six main modules (Home, Matches, Results, Events, Players, Stats) and automated functional testing of some test cases, including navigation, search, and data visibility. Implementing a project structure organized with Python, WebDriver Manager, and GitHub integration.

API Testing Project – The Dog API (Postman) Personal project (August 2025)

Developed an API testing project using The Dog API to validate breed data, random image endpoints, and query parameters. Designed and executed 10+ functional test cases in Postman and automated key scenarios with RestAssured to ensure response validity, status codes, and performance.

WFC Terrain Generator

Bachelor thesis project (January – July 2024)

WFC Terrain Generator is a tool to help Unity game developers procedurally generate a terrain for their games using Wave Function Collapse algorithm. The terrains are generated with minimum setup with any game asset in similar shape as an input, and the output can be manually selected to ensure control.

Testing of Facebook Sign Up and Login Process, and Udemy Search Function

Personal project (November 2024)

Developed detailed test cases for Facebook's sign-up and login process and Udemy's search functionality. Ensured comprehensive coverage by testing with valid and invalid inputs, verifying user flows, and error handling to ensure seamless functionality. Utilized pairwise concept to test category search, course search, and instructor search for efficiency.

Looking Up I See Only A Ceiling – Localization (for Silver978)

Freelance project (February 2024, September 2025)

Looking Up I See Only A Ceiling is a short point-and-click game about a fatigued med school student encountering bizarre events in her little house. I am responsible to localize the game in Indonesian language, in hopes it would attract more Indonesian gamers to play the game on Steam and enjoy the immersive experience. My responsibilities include the translation of 900+ lines of English texts and making sure they all fit perfectly in the dialogue box. In November 2024, DLC (Downloadable Content) for LUISOAC titled “The Relapse” was released, adding a new story to the game. I returned to work in September 2025 to translate over 900 additional lines of text.

CERTIFICATION

Udemy – Rest API Testing (Automation) from Scratch-Rest Assured Java	September 2025
TOEFL ITP – Educational Testing Service – Score 613/677	September 2024
Udemy – The Complete 2024 Software Testing Bootcamp	August 2024
Udemy – Complete C# Unity Game Developer 2D	October 2023
BUMN Magenta – Program Magang Mahasiswa Bersertifikat (PMMB)	September 2023
